LXT

LXT is a system with its own tools, batteries, and chargers. A combination of innovative tool design and optimum power provide a genuine solution for high demand industrial users.

Optimum power supply and charging system

The LXT range of tools and batteries come with a built-in program, providing digital communication between the battery and tool. Allowing not only for the battery to talk with tool but also the tool to talk to the battery. A battery technology and motor that work together for optimum performance.

OPTIMUM CHARGING

After use a battery reaches a high temperature and it is necessary to cool the battery down before you charge it. Makita are able to produce fast charge times because our batteries and chargers are kept cool whilst the battery is connected.

LONGER WORK TIME

Makita's 18v & 14v batteries have a built in memory chip that records the battery usage history. While the battery is connected it will transmit the data to the charger.

BUILT-IN CPU

The CPU built into the charger communicates with the individual battery and analyses its condition; the battery may have been abused by heat, overdischarging, or weathered by cycle-age. This optimised charging system extends the life of the battery.

ANYTIME CHARGE

A great advantage of Lithium Ion technology is that it provides the user with the possibility to charge the batteries anytime, without any need to wait for their complete power deployment. A great improvement compared to older technologies like Ni-Cad.
